## Calculate effective height of wall

Effective height of wall;
Height of wall from toe to front edge of top gabion;
$=598 \mathrm{~mm}$

## Calculate the angle of rear plane of wall

Effective angle of rear plane of wall;
Calculate the effective face angle
Effective face angle;

## Loading

Surcharge;
Horizontal line load;
Vertical height of horizontal load from top gabion;
Dist of horiz. load from leading edge of top gabion;
Vertical height from toe;
Horizontal distance of horiz. load from toe;
Vertical line load;
Dist of vert. load from leading edge of top gabion;
Horizontal distance of vert. load from toe;
Surcharge loading as equiv height of soil;
Active thrust due to soil;
Active thrust due to surcharge;
Total active thrust;
Total thrust resolved horizontally;
Total thrust resolved vertically;
Height above toe thrust acts if $\alpha$ is 0 ;
